König 5.8 Ghz wireless A/V system

General information

The 2.4 GHz frequency band is very busy due to applications like Bluetooth®, WiFi and wireless networks. Therefore the signals of such equipment are easily distorted. That is why the VID-TRANS510KN uses the 5.8 GHz frequency, to avoid any interference between such devices. The reach is 100 m in the open field and 30 m indoor. Now you can enjoy wireless video and audio in your home, without any problems. Includes infrared extension for control of connected equipment with the original remote.

Specifications

Channels:	4
